CAD Designers Audio/Visual and Security Introduction Cover Letter

Audio/Visual and Security Drafting/Drawing Services:

CAD Designers has been in business since 1999. We have worked as a consultant to many Audio/Visual and Security Design and Engineering firms involving a wide range of experience. Drawings are produced to the standards specified by our clients. We have completed work on Audio Visual, Security and Surveillance and Access Control Drawings. We have Commercial, Industrial, Government and Educational experience. We have completed multiple types of drawings including Site Plans, Elevations, Sections, Installation Details and Functional Wiring Diagrams. We support AV and security firms across the United States. Our goal is not only to meet, but always exceed your expectations.

We meet the exacting deadlines that the Audio/Visual and Security industry expects. We have the ability to meet the fast pace required for any project need. All work is completed by our drafting team, which is based in Raleigh, North Carolina, serving clients nationwide. We work in AutoCAD and AVCad, deliver native DWG files with PDFs. We offer either a flat-fee or hourly pricing.

CAD Designers has been a dependable AV drafting partner providing professional services at a competitive price. In today's economic climate, contracting your drafting needs is smart business. While many of our larger clients utilize CAD Designers as an overflow solution, our smaller clients tend to use CAD Designers for all of their drafting needs. Outsourcing your drafting to CAD Designers can save your company money by not having to direct-hire additional staff at times of economic uncertainty. When the need arises, we can help you complete your project without adding any long-term overhead costs.

We take pride in our QA/QC program. We ensure that each project is thoroughly reviewed and correct prior to being delivered to our clients. It is our goal to minimize revisions. This can be done by properly preparing before each project begins. We have an initial kickoff with all of our clients so we may completely understand their goals, objectives and preferred drawing formats. As we complete a few projects for our clients, the revisions are reduced to a minimum. Drawings are reviewed to 90 percent or better before you see them. We provide a next business day turnaround on redlines. It is our goal to give you a final product that meets your objectives on a fast-paced timeline. Send me your scope, software and deadline, and I will reply by the next business day.

Thank you for your consideration,

Charlie Seymour
